

Xinchen Gao

646-866-4298 | gaoxinchen622@gmail.com | linkedin.com/in/xinchen-gao | New York, NY

Education

Columbia University , Columbia Business School & Fu Foundation School of Engineering and Applied Science <i>Master of Science in Business Analytics (STEM)</i>	New York, NY Expected Dec 2026
Capital University of Economics and Business <i>Bachelor of Management in Information Management and Information System</i>	Beijing, China Sep 2021 – Jul 2025

Professional Experience

Meituan Inc | AI Analytics Intern Beijing, China / May 2026 – August 2026

- Refined **AI agents** and packaged recurring reporting workflows into reusable **agent skills** for cross-team adoption, reducing weekly manual analysis time by ~10 hours and enabling strategy teams to diagnose issues and identify performance drivers more efficiently.
- Developed a data quality **evaluation framework** for agent-generated weekly/monthly reports, validating **SQL** outputs accuracy, data extraction completeness, Excel stitching mismatch rate, and metric consistency, reducing recurring reporting errors by 24.5%.
- Applied prompt engineering and human-in-the-loop refinement to improve agent tool-use reliability across SQL generation, data retrieval, Excel stitching, and report synthesis workflows.
- Developed an AI-assisted HTML dashboard for brand anomaly analysis, surfacing performance fluctuations across weighted brand segments and enabling faster root-cause investigation for ad hoc business questions.

Tencent Inc | Data Analysis Intern Beijing, China / Nov 2024 – Dec 2024

- Conducted full-funnel retention analysis on 12.1M Tencent Video users, identified a major drop-off after first video completion, and designed an **A/B test** on recommendation flow that increased next-video play rate by 4.5%.
- Used **SQL** with window functions (rank, lead) to map user journeys from app open to video playback, completion, and next video start, pinpointing the key stage where users disengaged and quantifying conversion loss across the viewing funnel.
- Analyzed pre-churn behavioral patterns in **Python** (Pandas & Numpy) by comparing retained and churned users across watch time, session frequency, and recommendation clicks, uncovering engagement signals most correlated with repeat usage.
- Collaborated with cross-functional teams to launch the experiment and built a **dashboard** to monitor key performance metrics, presenting insights in weekly stakeholder updates to support data-driven product decisions.

Beijing Xinshichuangyu Technology Co., Ltd. | Data Analysis Intern Beijing, China / Jan 2024 – Mar 2024

- Increased player participation by 18% vs. the previous event design by analyzing player records and gameplay funnels to identify entry-to-match drop-offs, then designing and validating an **A/B test** that optimized event entry flow and reward visibility.
- Enabled weekly product decision-making on retention and engagement KPIs by extracting and standardizing 300K+ player records from **MySQL** using optimized joins and index-backed aggregations, producing datasets for D1 retention and participation.
- Diagnosed conversion loss and drop-off drivers by sessionizing 2GB+ gameplay logs in SQL and Python and reconstructing funnels (entry → match start → completion), isolating system-level friction points and quantifying step-level conversion loss.

Ernst & Young (EY) | Risk & Compliance Intern Beijing, China / Jul 2023 – Aug 2023

- Improved compliance reporting accuracy and throughput by extracting and validating physician engagement and reimbursement records using **SQL** and structured **Excel** reconciliation, reviewing 150+ records/day to support audit-ready reporting for clients.
- Increased data integrity for investigations by reconciling activity logs, event records, and payment documentation, resolving mismatches and missing fields through standardized validation rules and exception tracking.
- Automated reconciliation and validation workflows using Python, implementing data checks and anomaly detection rules to improve compliance review efficiency.
- Shortened review turnaround time by streamlining tracking templates and handoff workflows (error categorization, rework loops, status visibility), improving operational efficiency for compliance case reviews.

Beijing TFLying Transducer Technology Co.,Ltd | Data & Operations Analyst Intern Beijing, China / Jan 2022 – Dec 2022

- Reduced recurring reporting preparation time by ~60% by building **Python** ETL scripts (batch extraction, schema alignment, dedupe, format normalization) to replace manual exports and standardize datasets for consistent downstream monitoring.
- Queried high-frequency telemetry data (temperature, voltage, runtime) from **MySQL** for 200+ connected devices and optimized queries through index and field usage improvements, accelerating historical data retrieval for operational performance reviews.

Skills

Programming: SQL, Python(Pandas, NumPy, Matplotlib, Scikit-learn, Statsmodels), R, Matlab, Java.

AI / LLM: AI Agents, Prompt Engineering, RAG, MCP, Function Calling, Agent Evaluation, AI Workflow Automation.

Tools: Excel, Tableau, Power BI, PowerPoint, MySQL, Git, Jupyter Notebook, AWS (Redshift, S3), GCP, Azure.

ML Algorithms: Linear Regression, Random Forest, K-Means, Logistic Regression, Gradient Boosting, XGBoost.

Data Analytics: A/B Testing, Time Series Forecasting, Experiment Design, Data Cleaning & Wrangling, ETL Pipelines.
